Corrigendum

Corrigendum to “Three ideal observer models for rule learning in simple languages” [Cognition 120 (3) (2011) 360–371]

Michael C. Frank^{a,*}, Joshua B. Tenenbaum^b^a Department of Psychology, Stanford University, United States^b Department of Brain and Cognitive Sciences, Massachusetts Institute of Technology, United States

The authors regret that there are three minor errors in the model description. Eq. (4) should read

$$p(t_i|r) = \begin{cases} \frac{\alpha}{|r|} + \frac{(1-\alpha)}{|S|} & \text{if } t_i \text{ consistent with } r, \\ \frac{(1-\alpha)}{|S|} & \text{otherwise,} \end{cases}$$

Eq. (7) should read

$$p(T|Z) = \prod_c \sum_{r_c} \prod_{t_i \in C} p(t_i|r_c)p(r_c)$$

and Eq. (8) should read

$$p(E|T) = \prod_{e_k \in E} \sum_{r_j \in R} p(e_k|r_j)p(r_j|T)$$

We have verified that these errors did not substantively affect any numerical or graphical results reported in the paper, and have corrected the linked codebase.
